

DÉCLARATION DES PERFORMANCES

DoP 0214

pour le système d'injection fischer FIS HT II (fixation à scellement pour utilisation dans le béton)

FR

1. Code d'identification unique du type de produit:

DoP 0214

2. Usage(s) prévu(s):

Fixation dans du béton fissuré ou non fissuré, voir annexes, en particulier les annexes B1 - B8.

3. Fabricant:

fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Allemagne

4. Mandataire:

-

5. Système(s) d'évaluation et de vérification de la constance des performances:

1

6. Document d'évaluation européen:

EAD 330499-01-0601, Edition 04/2020

Evaluation Technique Européenne:

Organisme d'évaluation technique:

Organisme(s) notifié(s):

ETA-12/0556; 2021-06-07

DIBt- Deutsches Institut für Bautechnik

2873 TU Darmstadt

7. Performance(s) déclarée(s):

Résistance mécanique et stabilité (BWR 1)

Résistance caractéristique à la charge de traction (charge statique et quasi-statique):

Résistance à la rupture de l'acier (charge de traction): Annexes C1, C2

Résistance à la rupture par extraction glissement: et rupture du cône béton: Annexes C4 - C5

Résistance à la rupture du cône béton: Annexe C3

Distance au bord pour éviter la rupture par fendage sous charge: Annexe C3

Robustesse: Annexes C3 - C5

Couple de serrage maxi: Annexes B3, B4

Distance au bord et entraxe mini: Annexes B3 - B4

Résistance caractéristique à la charge de cisaillement (charge statique et quasi-statique):

Résistance à la rupture de l'acier: Annexes C1 - C2

Résistance à la rupture par effet de levier: Annexe C3

Résistance à la rupture du béton en bord de dalle: Annexe C3

Déplacements sous charge à court et long terme:

Déplacements sous charge à court et long terme: Annexe C6

Résistance caractéristique et déplacements pour les catégories de performance sismique C1 et C2:

Résistance à la charge de traction, catégorie C1: NPD

Résistance à la charge de traction, catégorie C2: NPD

Résistance à la charge de cisaillement, catégorie C1: NPD

Résistance à la charge de cisaillement, catégorie C2: NPD

Facteur espace annulaire: NPD

Hygiène, santé et environnement (BWR 3)

Contenu, émission et/ou rejet de substances dangereuses: NPD

8. Documentation technique appropriée et/ou documentation technique spécifique:

-

Les performances du produit identifié ci-dessus sont conformes aux performances déclarées. Conformément au règlement (UE) no 305/2011, la présente déclaration des performances est établie sous la seule responsabilité du fabricant mentionné ci-dessus.

Signé pour le fabricant et en son nom par:

Dr.-Ing. Oliver Geibig, Directeur Général Business Units & Ingénierie
Tumlingen, 2021-06-14

Jürgen Grün, Directeur Général Chimie & Qualité

Cette DoP a été préparée en plusieurs langues. En cas de différend relatif à l'interprétation, la version anglaise prévaudra.

L'annexe comprend des informations volontaires et complémentaires en langue anglaise dépassant les exigences légales (spécifiées de manière neutre).

Specific Part

1 Technical description of the product

The "fischer Injection system FIS HT II" is a bonded fastener consisting of a cartridge with injection fischer mortar FIS HT II or FIS HT II High Speed or FIS HT II Low Speed and a steel element according to Annex A4.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex B 3 and B 4, C 1 to C 5
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1 to C 3
Displacements under short-term and long-term loading	See Annex C 6
Characteristic resistance and displacements for seismic performance categories C1 and C2	No performance assessed

3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

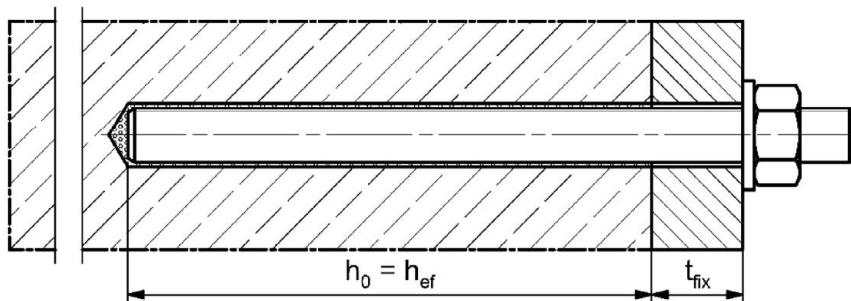

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Intended use Specifications (part 1)				Annex B 1 Appendix 8 / 21						

Specifications of intended use (part 2)

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc coated steel, stainless steel or high corrosion resistant steel).
- For all other conditions according to EN1993-1-4:2015 corresponding to corrosion resistance classes to Annex A 5 table A5.1.

Design:

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed in accordance with:
EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018.

Installation:

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- In case of aborted hole: The hole shall be filled with mortar
- Anchorage depth should be marked and adhered to on installation
- Overhead installation is allowed

fischer injection system FIS HT II

Stainless steel R property class 80	*		

Alternatively: Colour coding according to DIN 976-1:2016

¹⁾ PC = property class

Installation conditions:

Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled

- Materials, dimensions and mechanical properties according to Annex A 5, Table A5.1
- Inspection certificate 3.1 according to EN 10204:2004, the documents have to be stored
- Setting depth is marked

Annex B 5

Appendix 12 / 21

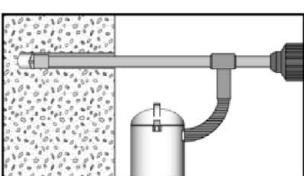

Installation instructions part 1

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		Drill the hole. Nominal drill hole diameter d_0 and drill hole depth h_0 see tables B3.1, B4.1		
2		Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18 \text{ mm}$ blow out the hole four times by hand		For $h_{ef} > 12d$ and / or $d_0 \geq 18 \text{ mm}$ blow out the hole four times with oil-free compressed air ($p \geq 6 \text{ bar}$)
3		Brush the drill hole four times. For deep holes use an extension. Corresponding brushes see table B5.1		
4		Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18 \text{ mm}$ blow out the hole four times by hand		For $h_{ef} > 12d$ and / or $d_0 \geq 18 \text{ mm}$ blow out the hole four times with oil-free compressed air ($p \geq 6 \text{ bar}$)

Go to step 5

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1		Check a suitable hollow drill (see table B1.1) for correct operation of the dust extraction
2		Use a suitable dust extraction system, e. g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter d_0 and drill hole depth h_0 see tables B3.1, B4.1

Go to step 5

fischer injection system FIS HT II

Intended use
Installation instructions part 1

Annex B 6

Appendix 13 / 21

Installation instructions part 2

Preparing the cartridge

5		Remove the sealing cap Screw on the static mixer (the spiral in the static mixer must be clearly visible)
6		Place the cartridge into the dispenser
7		Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

Go to step 8

Injection of the mortar

8			
---	--	--	--

Go to step 9

fischer injection system FIS HT II

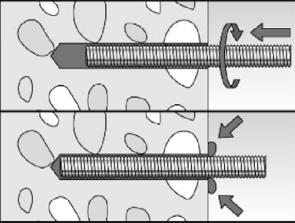

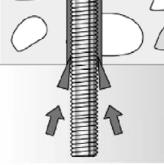

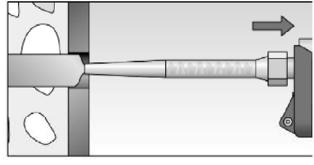

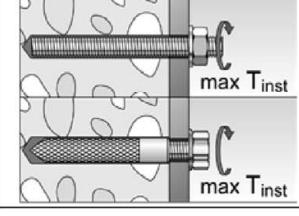

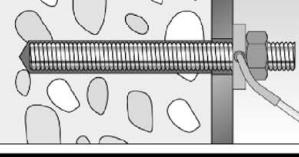

Intended use
Installation instructions part 2

Annex B 7

Appendix 14 / 21

Installation instructions part 3

Installation of anchor rods or fischer internal threaded anchors RG MI

9		<p>Only use clean and oil-free metal parts. Mark the setting depth of the metal part. Push the anchor rod or fischer internal threaded RG MI anchor down to the bottom of the hole, turning it slightly while doing so. After inserting the metal parts, excess mortar must be emerged around the anchor element.</p>
	 <p>For overhead installations support the metal part with wedges (e.g. fischer centering wedges) or fischer overhead clips.</p>	 <p>For push through installation fill the annular gap with mortar</p>
10	 <p>Wait for the specified curing time t_{cure} see table B5.2</p>	 <p>11</p> <p>Mounting the fixture $\text{max } T_{\text{inst}}$ see tables B3.1 and B4.1</p>
Option	 <p>After the minimum curing time is reached, the gap between metal part and fixture (annular clearance) may be filled with mortar via the fischer filling disc. Compressive strength $\geq 50 \text{ N/mm}^2$ (e.g. fischer injection mortars FIS HT II, FIS HB, FIS SB, FIS V, FIS EM Plus). ATTENTION: Using fischer filling disc reduces t_{fix} (usable length of the anchor)</p>

	Stainless steel R and high corrosion resistant steel HCR																
¹⁾ In absence of other national regulations																	
²⁾ Only admissible for high corrosion resistant steel HCR, with $f_{yk} / f_{uk} \geq 0,8$ and $A_5 > 12\%$ (e.g. fischer anchor rods)																	
³⁾ Values in brackets are valid for undersized threaded rods with smaller stress area A_s for hot dip galvanised standard threaded rods according to EN ISO 10684:2004+AC:2009																	
fischer injection system FIS HT II										Annex C 1							
Performances Characteristic values for steel failure under tension / shear load of fischer anchor rods and standard threaded rods																	
										Appendix 16 / 21							

Table C2.1: Characteristic values for steel failure under tension / shear load of fischer internal threaded anchors RG MI
